recognition.

PTM: Proteolytic activation by furin or a furin-like protease cleaves the protein in two parts, PA-20 and PA-63; the latter is the mature protein. The cleaves of parts, ball of the cell surface and probably in the serum of infected animals as well; both native and cleaved PA are able to bind to the cell receptor. The release of PA-0 from the remaining receptor-bound PA63 exposes the binding site for EF and LE, and promotes oligomerization and internalization of the protein.

MISCELLANDOUS: In Ref. 9 multiple mutagenesis experiments were performed that showed that the residues present in the small loop of domain 4, and not the ones in the large loop, are involved in
                                                                                                                                                                           X-RAY CRYSTALLOGRAPHY (2.1 ANGSTROMS).

Somplex is required for the cohesion of sister chromatida after complex is required for the cohesion of sister chromatida after DNA replication. The cohesin complex apparently forms a large proteinaceous ring within which sister chromatids can be trapped. At anaphase, the complexes are composed and dissociates from chromatin, allowing sister chromatids to segregate.

STBUNIT: Cohesin complexes are composed of the SMC1 and SMC3 heterodimer attached via their hinge domain, MCD1/SCC1 which linke them, and IRR1/SC3, which interacts with MCD1. The cohesin complex also interacts with SCC2, which is required for its association with chromosomes.

C. SUBCELLULAR LOCATION: Nuclear protein. Associates with chromatin. Before prophase; it is scattered along chromosome arms. At anaphase, the MCD1 subunit of the cohesin complex is cleaved, ladding to the dissociation of the complex from chromosomes, allowing chromosome separation.

C. I. DOMAIN: The Itakible hinge domain, which separates the large intramolecular coiled coil regions, allows the heterotypic interaction with the corresponding domain of SMC1, forming a V-shaped heterodimer. The two heads of the heterodimer are then connected by different ends of the cleavable MCD1 protein, forming a ring structure (By similarity).

C. SIMILARITY: Belongs to the SMC family. SMC3 subfamily. complex.";

  detected action on small molecule substrates.

OCRACTOR: Binds 1 zinc ion per subunit (By similarity).

SUBUNIT: Disulfide-linked heterodimer of a light chain (L) and a heavy chain (H). The light chain has the pharmacological activity, while the N- and C-terminal of the heavy chain mediate channel formation and toxin binding, respectively.

SUBCELLULAR LOCATION: Secreted.

MISCELLANDEOUS: There are seven antigenically distinct forms of botulinum neurotoxin: Types A, B, Cl, D, E, F, and G.

MISCELLANDEOUS: BOTULINUM TYPE D NEUROTOXIN IS SYNTHESIZED BY D STRAIN OF CLOSTRIDIUM BOTULINUM WHICH CARRY THE APPROPRIATE

BACTERIOPHAGE.

Protecting humans against anthrax using mutant B groups (anthrax protective antigens) of the pore-forming binary A-B toxin of Bacillus anthracis. 

Claim 4; Page; 77pp; English.

The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS2113 and AAMS1484-AAMS1500), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines.                                                                                                                                    The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAM2113 and AAM51844-AAM51500), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAM51483)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180

The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAM5113 and AAM51484-AAM5150), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAM51483) 900 009 9 9 720 DMLNISSLRQDGKTFIDFKKYNDKLPLYISNPNYKYNVYAVTKENTIINPSENGDTSTNG 720 480 540 540 Anthrax; PA; protective antigen; antibacterial; pore-forming toxin; B moiety; A-B anthrax toxin; Bacillus anthracis; vaccine; mutant; mutein.                                                                                                                                   8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                300
                                                                                                                                                                                                                                                                                                                                   The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS1213 and AAMS1484-AAMS120), sepecially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Noce: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAMS1483)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180

The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAM52113 and AAM5184-AAM51500), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAM51483)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   , toxin;

The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS2113 and AAMS1844-AAMS1800), especially mutants in the B molety of the pore-forming binary A-B anthrax toxin, where the B molety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is desived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAMS1483)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SEVHGNAEVHASFFDIGGSVSAGFSNSNSSTVAIDHSLSLAGERTWAETWGLNTADTARL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ठें
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS2113 and AAMS1464-AAMS1500), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAMS1483)

The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAM52113 and AAM51804-AAM51500), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. The present sequence is that of the anthrax PA protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 QSAIWSGFIKVKKSDEYTFATSADNHVTWAVDDQEVINKASNSNKIRLEKGRLYQIKIQY 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                               The sequence encoding the protective antigen of Bacillus anthracis may be used in the construction of a nucleic acid which encodes a fusion protein comprising the anthrax protective antigen binding domain of the native anthrax lethal factor and a sequence encoding an activity inducing domain of a second protein. The fusion proteins are useful for the specific killing of tumour cells or the killing of cells infected with intracellular pathogens, especially HIV. (Updated on 25-MAR-2003 to correct PN field.)

The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS2113 and AAMS1800), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAMS1483)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         QRENPTEKGLDFKLYWTDSQNKKEVISSDNLQLPELKQKSSNSRKKRSTSAGPTVPDRDN 180

Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAMS1483) 720 Anthrax, PA, protective antigen, antibacterial, pore-forming toxin, B moiety, A-B anthrax toxin, Bacillus anthracis, vaccine, mutant, mutein. Protecting humans against anthrax using mutant B groups (anthrax protective antigens) of the pore-forming binary A-B toxin of Bacillus DMLNISSLRQDGKTFIDFKKYNDKLPLYISNPNYKVNVYAVTKENTIINPSENGDTSTNG /note= "Wild-type Asp substituted by 'note= "Wild-type Lys substituted by 'note= "Wild-type Lys substituted by ል /note= "Wild-type Asp substituted Anthrax PA mutant K395D/K397D/D425K/D426K Location/Qualifiers 395 Ą 735 Claim 4; Page; 77pp; English. 04-MAY-2000; 2000US-0201800P 04-MAY-2001; 2001WO-US014372 IKKILIFSKKGYEIG 735 AAM51494 standard, protein; (first entry) Sellman BR; (HARD ) HARVARD COLLEGE WPI; 2002-017725/02 Misc-difference 397 Bacillus anthracis. The invention provides a recombinant DNA construct that comprises a vector and at least one nucleic acid (or its fragment) encoding a combination of Bacillus anthracis proteins, selected from protective antigen (PA), MAT-PA (PA with its secretory signals replaced with those of tissue plasminogen with its secretory signals replaced with those of tissue plasminogen activactor) and PAG3 (63 KDa PA). The construct is useful as a DNA vaccine for anthrax and in producing inflectious alpha virus particles. These particles, expressing the B. anthracis proteins are useful also as vaccines for anthrax. Host cells transformed with the construct are useful for analyzing the effectiveness of drugs and agents that inhibit anthracis MAT-PA protein. vaccines for anthrax, in producing and agents inhibiting anthrax. The invention provides a recombinant DNA construct that comprises a vector and at least one nucleic acid (or its fragment) encoding a combination of Bacillus anthracis proteins, selected from protective antigen (PA), MAT-PA (PA with its secretory signals removed), TPA-PA (PA with its secretory signals replaced with those of tissue plasminogen activator) and PA63 (63 KDa PA). The construct is useful as a DNA vaccine for anthrax and in producing infectious alpha virus particles. These particles, expressing the B. anthracis proteins are useful also as vaccines for anthrax. Host cells transformed with the construct are useful for analyzing the effectiveness of drugs and agents that inhibit anthracis TPA-PA proteins. The present sequence represents a B. anthracis proteins. 120 148 720 661 88 Recombinant DNA construct useful as vaccines for anthrax, in producing host cells for analyzing the drugs and agents inhibiting anthrax. The invention provides a recombinant DNA construct that comprises a vector and at least one nucleic acid (or its fragment) encoding a combination of Bacillus arthracis proteins, selected from protective antigen (PA). MAT-PA (PA with its secretors ignals removed). TPA-PA (PA with its secretory aignals replaced with those of tissue plasminogen activator) and PA63 (63 KDa PA). The construct is useful as a DNA vaccine for anthrax and in producing infectious alpha virus particles. These particles, expressing the B. anthracis proteins are useful also as vaccines for anthrax. Host cells transformed with the construct are useful for analyzing the effectiveness of drugs and agents that inhibit anthrax or B. anthracis proteins. The present sequence represents a B. anthracis PA protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ô

This sequence shows the B. anthracis protective antigen (PA). An immunogenic fragment of PA, pCPA, can be used to produce an immune response which protects an animal against lethal injection with Bacillus anthracis. DNA encoding the B. anthracis PA can be used in conjunction with DNA encoding the lethal factor (LF) in a DNA vaccine. Using a DNA vaccine which encodes the muteated LF protein or fragment alone or in combination with a DNA encoding the PA protein or its fragment, both components (humoral and cell-mediated) of the immune system are stimulated, which results in longer term immune memory response. The combined use of a mutated LF and PA gene or their fragments results in a higher level of immune response, as judged by overall serum antibody titers for LF and PA antigens, than the use of either LF or PA genes in
                                                                                                                                                                                                                                               Lethal factor; LF; immunogen; LF4; protective antigen; PA; DNA vaccine; humoral; cell-mediated; immune memory response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Protecting animal against lethal infection with Bacillus anthracis, by administering wildtype or mutated form of Bacillus anthracis lethal factor protein or its fragment or a nucleic acid encoding the mutated protein.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 31, P.
